Notes

- The original title (Patient Demographics) did not explain to the user what the purpose of the form was. I thought that the title 'Add Patient Data' would be more descriptive.
- The question mark is a button that can be clicked, which in turn will activate a pop-up with helpful information for the user about the current question.
- Clicking on the calendar button will pop up a calendar widget. Selecting a date through the widget will auto-fill the user's date of birth.
- The user can auto-fill their address by using a postcode finder widget. After the user inputs their postcode and types search, a list of addresses matching the postcode will pop up. The user can select an address, and the address details will be automatically added to the form.
- While the filling in the form, the user is given visual cues. The green ticks indicate that the user has correctly completed that field.
- If the user inputs data in the wrong format or tries to submit the form without completing all the mandatory fields, then a red X will appear next to the problematic field.
- If a user clicks 'Yes' for the question 'Do you have any allergies?', then a new set of controls will appear below the radio buttons. The user can specify the allergies they have in the input boxes, as well as add and remove input boxes.
